

NeuroPathway Ecosystem

Business Plan

Founder: Tanja Hanson

Sector: HealthTech | EdTech | Early Intervention | SEND Innovation

Location: Greater Manchester, United Kingdom

Executive Summary

NeuroPathway Ecosystem is an AI-supported early identification and evidence-building platform designed to improve outcomes for neurodivergent children, families, schools, and professionals.

The platform bridges the gap between education, healthcare, social care, and families by turning fragmented everyday observations into structured, longitudinal evidence that supports earlier intervention and more informed decision-making.

Our mission is simple:

Prevention is the cure.

The current SEND and EHCP system is overwhelmed. Schools struggle with evidence collection, parents face long waits for support, and professionals work in silos with incomplete information. NeuroPathway aims to reduce this pressure through a secure digital ecosystem that creates clearer patterns, earlier visibility of need, and stronger evidence for support pathways.

The platform consists of two connected systems:

- **NeuroPathway Professional Platform**

A professional dashboard for schools, SENCOs, support staff, healthcare professionals, and families.

- **Safe Space**

A child and young-person-focused wellbeing and voice app supporting emotional regulation, journaling, wellbeing tracking, and self-expression.

NeuroPathway is built from lived experience, frontline understanding, and a deep commitment to reducing crisis through early support.

The long-term vision is to create a nationally scalable ecosystem that improves outcomes, reduces delays, supports overstretched services, and gives children a stronger voice in their own journey.

The Problem

Across the UK, the SEND and EHCP process is under significant strain.

Schools face:

- Delayed assessments
- Rising neurodivergent need
- Increasing exclusions
- Heavy administrative burden
- Limited time for frontline support

Parents face:

- Long waiting lists
- Repeatedly retelling their child's story
- Lack of joined-up communication
- Emotional burnout
- Crisis escalation before support arrives

Professionals face:

- Fragmented evidence
- Siloed information
- Inconsistent reporting
- Lack of longitudinal behavioural tracking

Many children are not identified early enough, resulting in worsening mental health, educational disengagement, safeguarding concerns, family breakdown, and costly crisis interventions.

Our Solution

NeuroPathway Ecosystem creates a secure, structured digital timeline of observations and evidence across settings.

The platform:

- Identifies patterns over time
- Builds EHCP-ready evidence
- Supports earlier intervention
- Encourages multi-agency collaboration
- Reduces duplication
- Gives children and families a voice

The system does not diagnose.

Instead, it helps professionals identify trends, patterns, functional difficulties, triggers, and support needs earlier and more consistently.

Key platform features include:

- Behaviour and wellbeing tracking
 - Cross-setting observation logging
 - AI-assisted pattern summaries
 - EHCP evidence reporting
 - Emotional wellbeing tools
 - Risk and safeguarding flagging
 - Child voice integration
 - Professional dashboards
 - Longitudinal reporting
-

Market Opportunity

The UK SEND system continues to experience significant growth in demand.

Key market indicators include:

- Rising ADHD and autism referrals
- Increased EHCP applications nationally
- Growing pressure on CAMHS services
- Increased exclusions linked to unmet needs
- Greater government focus on early intervention

Target markets include:

- Primary schools
- Secondary schools
- Multi-Academy Trusts
- Local Authorities
- NHS and Integrated Care Boards
- SEND support organisations
- Alternative provisions

Future expansion opportunities include:

- Adult neurodiversity support
 - Workplace wellbeing support
 - International licensing
 - White-label partnerships
 - Research and data insights partnerships
-

Business Model

NeuroPathway will operate using a scalable SaaS (Software as a Service) subscription model.

Revenue Streams

1. School & MAT Licensing

Annual subscription pricing based on pupil numbers and organisation size.

2. Local Authority Partnerships

Authority-wide licensing agreements for SEND and early intervention services.

3. NHS & ICB Partnerships

Integration partnerships focused on early intervention and preventative care.

4. Training & Consultancy

Professional training for schools and organisations around early identification and neurodiversity-informed practice.

5. Research Partnerships

Collaborative projects with universities and research organisations.

6. Future Enterprise Licensing

Potential licensing of AI infrastructure and reporting frameworks.

Competitive Advantage

NeuroPathway's strength lies in combining:

- Lived experience
- Cross-sector understanding
- Longitudinal evidence building
- Child voice integration
- AI-assisted pattern recognition
- Prevention-focused design

Unlike traditional systems focused purely on administration, NeuroPathway focuses on understanding the bigger picture around the child.

The ecosystem is designed to:

- Save professional time
- Improve evidence quality
- Reduce delays
- Support families earlier
- Reduce crisis escalation

Marketing & Growth Strategy

Growth will focus on strategic partnerships and evidence-led adoption.

Key Growth Channels

- LinkedIn thought leadership
- SEND conferences and networking
- School pilot programmes
- NHS innovation engagement
- Multi-Academy Trust partnerships
- Parent advocacy communities
- Research collaborations

Pilot Strategy

Initial pilots will focus on Greater Manchester schools and organisations to gather:

- Real-world feedback
- Outcome data
- User experience evidence
- Time-saving metrics
- Early intervention outcomes

This evidence will support future scaling and procurement opportunities.

Operations Plan

The business will initially operate as a lean startup model.

Initial Priorities

- MVP platform refinement
- Pilot recruitment
- User testing
- Data governance setup
- Safeguarding framework implementation
- Partnership building

Future Team Growth

Planned recruitment includes:

- Technical development support
- Data protection and compliance advisors
- SEND consultants

- Clinical advisors
 - Customer onboarding support
 - Research and evaluation partners
-

Financial Overview

Funding Requirement

NeuroPathway is seeking funding to support:

- Platform development
- Security and compliance
- Pilot delivery
- Research and evaluation
- Marketing and onboarding
- Operational setup

Use of Funds

Estimated funding allocation:

- 40% Platform Development
- 20% Staffing & Specialist Support
- 15% Research & Pilot Delivery
- 15% Marketing & Partnerships
- 10% Operational Costs

Financial Forecast

Projected revenue streams are expected through:

- Pilot subscriptions
- MAT licensing
- Local Authority contracts
- Consultancy services

The business aims to achieve sustainable recurring revenue within 24–36 months.

Founder Story

NeuroPathway was created through lived experience.

As a parent navigating years of crisis, repeated systemic failures, mental health struggles, and barriers to support, I experienced first-hand what happens when needs are missed, misunderstood, or identified too late.

This business was built from the belief that:

- families deserve better,
- children deserve to be heard,
- and prevention should come before crisis.

NeuroPathway is not just a business idea.

It is a mission to create meaningful change through earlier understanding, better collaboration, and practical support.

Risk Management

Key identified risks include:

- Slow procurement processes
- Data protection and compliance requirements
- Adoption resistance within organisations
- Funding limitations during early-stage growth

Mitigation strategies include:

- Phased pilot rollout
 - GDPR-first platform development
 - Strategic partnerships
 - External compliance consultation
 - Lean operational scaling
-

Exit Strategy

The long-term objective is to build NeuroPathway into a nationally recognised early intervention ecosystem with scalable licensing opportunities across education, healthcare, and social care.

Potential exit opportunities include:

- Acquisition by an EdTech or HealthTech organisation
- Strategic partnership acquisition
- NHS or education software integration buyout
- International licensing and expansion
- Investor-led scale-up

However, the primary goal is not a quick exit.

The focus is building a sustainable, impactful organisation capable of improving outcomes for children and families long term while creating measurable social value.

Vision

NeuroPathway exists to help create a future where:

- children are understood earlier,
- families are supported sooner,
- professionals work together more effectively,
- and crisis is reduced through prevention.

Small steps create big change.
